Experience & Projects

- **Easy Study – Graduate project – Backend developer & System analyzer**
 - Js, strapi.io, Git, Postman, UML
 - Easy Study is a platform mainly developed to help with the management of the educational system at my university.

- manage a team of my college mate.
- analyze the system and set the requirements.
- Design the system and make UML diagrams.
- Design the database and implement it using SQL database with strapi.io.
- Design custom APIs that work perfectly with mobile apps.

For more details, you can visit this [link](#).

- **Show Me Lattakia – self project – iOS developer & Backend developer & software analyzer**

Swift, SwiftUI, Strapi.io, Postman

iOS app that shows the most famous location in my city Lattakia and helps you to find hotels there and make reservations.

- Implement UI design using swiftUI.
- Design the backend and implement it using Strap.io.
- Design the APIs and connect them with the app.

- **Smart Stadiums – Freelancing project – iOS developer & project manager**

Swift, SwiftUI, objective-c, git, Postman

iOS app allows you to create a football team and make reservations in football courts to set matches between your team and another team you choose, the match will be confirmed after the captain of the second team accepts your challenge.

- design the UI & UX for the iOS app.
- Implement the design with swift & swiftUI.
- Connect the app with the custom APIs.
- Collaborate with stakeholders (customers & team members) to get the best result.
- Manage the developing team (5 members) (backend developers & web developers) and set schedules and responsibilities for each member.
- Make presentations and documentation to explain the project to the customer and their managers.

For more details, you can visit this [link](#).

- **Published more than 5 Apps to App Store – SCIT company – publisher**

App store connect

- **Logo design – Freelancer – more than 5 project – logo designer & business card designer**

Adobe illustrator, adobe Photoshop, color theory
